

Firmware 3.0.0 and above release notes

What's New?

- Support for new widgets available in GH TE-MX iOS application
- Error info screen is being displayed when project cannot be loaded correctly. Previously Touch Encoder would boot up to a black screen

Bug fixes:

- Improve slider object performance
- Intermittent home button functionality
- Improve project and system update application
- Improve widget to widget transition time
- TE stops responding to CAN bus communication messages
